

## **Table Lamp Usage Instructions (E27 Socket and House Electrics)**

Thank you for purchasing your J-Line table lamp! To ensure safe and optimal use, please follow the instructions below:

### **1. Installation**

Check the Lamp:

- Ensure that the lamp is in good condition and all parts are included in the packaging.
- Verify the lamp's voltage rating is compatible with your home's electrical system (typically 120V or 240V depending on your region).

Insert the Bulb:

- The lamp uses an E27 socket, which is compatible with standard screw-type bulbs (E27 base).
- Choose a bulb with a wattage that does not exceed the maximum specified on the lamp (typically 60W or 100W, depending on the lamp model).
- Gently screw the bulb into the E27 socket until it is secure.

Power Connection:

Plug the lamp's power cord into a grounded electrical outlet that corresponds with your local voltage and current specifications.

If the lamp has an inline switch, make sure it is in the "off" position before plugging it in.

### **2. Operating the Lamp**

Turning On/Off:

If your lamp has a built-in switch on the power cord or base, press the switch to turn the lamp on or off.

Some lamps may also have a touch sensor or a rotary switch. Follow the instructions specific to your model to control the light.

## Adjusting the Lamp:

If your lamp has adjustable features (e.g., a movable neck or head), carefully adjust it to your preferred position. Avoid forcing parts to prevent damage.

## 3. Maintenance & Care

### Cleaning:

Unplug the lamp before cleaning.

Wipe the lampshade and base with a dry or slightly damp cloth. Avoid using harsh chemicals or abrasive materials.

For lamps with fabric shades, use a vacuum cleaner with a soft brush attachment to remove dust.

### Bulb Replacement:

Always use the correct wattage and bulb type (E27 screw base).

When replacing a bulb, ensure it is fully cool before touching it to avoid burns. Screw in the new bulb gently but firmly into the socket.

### Check for Damage:

Regularly check the power cord and plug for wear or damage. If there are any exposed wires or frayed cords, stop using the lamp immediately and replace the damaged parts.

If the lamp does not turn on, inspect the bulb and replace it if necessary.

## 4. Safety Tips

### Electrical Safety:

Only use the lamp with the voltage and current appropriate for your local electrical standards (typically 120V or 240V).

Ensure that the lamp is plugged into a properly grounded electrical outlet.

Never attempt to repair electrical components yourself. Contact a qualified electrician for repairs.

### Fire Safety:

Never leave the lamp on unattended for long periods, especially if the bulb is hot or near flammable materials.

Always use bulbs within the recommended wattage for your lamp.

### Children and Pets:

Keep the lamp out of reach of children and pets to avoid accidents.

Do not allow children to play with or touch the lamp when it's on, as the bulb can get hot.

By following these instructions, you can ensure safe and long-lasting use of your table lamp. Enjoy the added warmth and light it brings to your space!
